

## **Spring Web-MVC Assignments**

1. Define a web application with html form to submit login id and password to a Controller which will forward request to Home.jsp after successful validation. The Controller validates login id and password from database and pass login id to home page. In Home page, retrieve the login id and display it with success message. Customize to display messages in English and French languages. Implement the database access with JdbcTemplate class and inject the dependencies declaratively. Assume suitable additional data.
2. Implement the above with formController and custom validator components. Customize the error messages in english and French languages. Define the command class and assume suitable additional data. Implement the database access with Hibernate ORM support components. Assume suitable additional data.
