Spring Jdbc assignments

Define a database table 'Spring-Employee' with int id(primary key),String name and double salary as columns.
Define a spring application to insert,update,select and delete records using 'JdbcTemplate' class.Define the dependencies for JdbcTemplate in config.xml.
Implement the above using JdbcDaoSupport.
Implement the above using HibernateDaoSupport and define suitable classes.

Define another table in another database server. Define application to transfer salary from one table in first Database server to table in second Database server. Implement spring transaction support such that if transaction in one succeeds and in other fails the entire transaction is rolled back.Use spring DataSourceTransactionManager and HibernateTransactionManager in two different cases. Experiment with oracle and sql server databases
